

UBAKA UCHE KINGSLEY

Mobile App Engineer (Flutter)

Lagos, Nigeria | uchekingsley15@gmail.com | +234 708 401 0317 | linkedin.com/in/uche-ubaka-30a95b152 | github.com/uchekingsley | uchekingsley.netlify.app

SUMMARY

Flutter mobile developer with 2+ years shipping production apps, including real-time location tracking (Google Maps), REST/WebSocket integrations, and offline-first storage within Riverpod-based codebases. Experience deploying to Google Play Console and Apple App Store Connect/TestFlight.

WORK EXPERIENCE

Superstore Driver App • Flutter Mobile Developer (Contract) *April 2026 – Present*

- Built a driver-facing delivery app from scratch, including real-time order/location tracking with Google Maps integration
- Architected state management (Riverpod) within Clean Architecture, working inside established codebase conventions
- Implemented REST API integrations for live order and status updates

Wisemonie • Flutter Mobile Developer *April 2026 – Present*

- Shipped a fintech app to Google Play Store (July 2026 launch, 80+ downloads, 5-star rating); built 25+ screens, resolved 50+ bugs
- Integrated REST APIs for authentication and airtime flows with robust error handling
- Increased app speed 15% by offloading heavy processing off the UI thread; wrote 20 unit tests

Superstore Main App • Flutter Mobile Developer (Contract) *April 2026 – Present*

- Designed and built the complete “More Tab”: profile, wallet, rewards, BNPL, messaging, address management, watchlist, checkout flow, and order tracking
- Collaborated with the lead developer on core features and REST API integrations

HNG Internship • Flutter Mobile Developer Intern

- Independently built three production-ready apps: Personal Portfolio App, Tech Quiz App, and Smart Utility App

PERSONAL PROJECTS

Veegil Bank (Mock Banking App)

- Built a Flutter banking client consuming REST APIs for authentication, deposits, and transfers, using Clean Architecture with Riverpod
- Implemented idempotency handling via UUID-based request keys to prevent duplicate transactions on network retry
- Built a unified API error-parsing layer, converting server error responses into clear, user-facing messages
- Implemented paginated transaction fetching (hasMore-driven) with pull-to-refresh and infinite scroll

Frontlet Ops • Solo Developer, In Development

- Independently designed and built a church operations app end-to-end, engineered to scale to a 1,200-member congregation
- Processed and categorized 470+ testimonies for offline viewing and export, increasing sorting speed by 120%
- Currently in active use by a 20-person operations team, with offline-first data storage and OAuth 2.0 Google Sign-In

SKILLS

Languages & Frameworks: Dart, Flutter, Riverpod, Clean Architecture

Networking & Real-Time: REST APIs, WebSockets, Google Maps integration

Data & Storage: Offline-first storage, SQLite, Firebase, Supabase

Testing: Unit, Widget, and Integration Testing

Tools & Deployment: Git, CI/CD (GitHub Actions), Google Play Console.

Security: Secure Storage, OAuth 2.0

EDUCATION

Bachelor of Arts, History – 2026, University of Ibadan

CERTIFICATIONS

Mobile App Development Intern – HNG, 2026 | Flutter App Development – Udemy, 2025 | AI Fundamentals – BAFAI Institute, 2025
